

The diagram illustrates the architecture of the proposed model, showing the flow from input to output through various layers, including Coding and NMD Sensitive components.

**Coding:** This section shows the initial processing stages. It begins with a large black block, followed by a series of smaller black blocks connected by arrows. The sequence includes a black block, a blue block, a black block, a green block, and a final black block. The output of this stage is labeled "Coding".

**NMD Sensitive:** This section shows the subsequent processing stages. It begins with a large black block, followed by a series of smaller black blocks connected by arrows. The sequence includes a black block, a blue block, a black block, a green block, and a final black block. The output of this stage is labeled "NMD Sensitive".
