

Consequence of Isoform Switch (and the opposing consequence)

Complete ORF loss (paired
with Complete ORF gain)

Domain loss (paired with
Domain gain)

Domain non-reference
isotype loss (paired
with Domain non-reference
isotype gain)

Intron retention loss
(paired with Intron
retention gain)

NMD sensitive (paired
with NMD insensitive)

ORF is shorter (paired
with ORF is longer)

Signal peptide loss
(paired with Signal
peptide gain)

Transcript is Noncoding
(paired with Transcript
is coding)

FT
vs
RGC

FDR < 0.05

Not Significant
